PROFESSIONAL SUMMARY

Data analyst with an electrical engineering background from Poli-USP. At Hyundai Motor Brasil, I own vehicle test data analysis end to end: preparing and validating raw datasets in Python, automating repetitive workflows (cutting analysis time by about 80%), and delivering reports that engineers and managers use to make decisions. I care about what keeps analytics reliable over time: clear validation rules, repeatable processes, and outputs other people can trust. I work comfortably in English with technical and business teams, and I am expanding my SQL and Power BI skills on top of a strong Python base.

SKILLS

Data & Analytics: Python (advanced), Pandas, NumPy, data cleaning, transformation & validation, statistical analysis, SQL (working knowledge, including SQLite in a reporting workflow; in active development)

Visualization & BI: Matplotlib, Plotly, Streamlit, analytical reports and executive presentations; Power BI (beginner, in active development)

Automation & Tools: Process automation with Python, Scikit-learn, XGBoost, Git / GitHub, Microsoft 365 Copilot, MATLAB / Simulink, C++

Engineering Context: Vehicle test data (dynamometer, GPS telemetry, CAN bus), instrumentation, coastdown analysis, vehicle dynamics

WORK EXPERIENCE

Hyundai Motor Brasil *Jan 2025 – Present*

Junior Research & Development Analyst – Energy Efficiency & Data Analytics

- Prepared, cleaned, and analyzed large datasets from chassis dynamometer and road tests (Python, Pandas, NumPy), identifying trends and anomalies and delivering structured insight reports and presentations for technical and non-technical stakeholders.
- Built a Python coastdown analysis tool with automated report generation and SQLite-based data storage, cutting road-load analysis time by roughly 80% and standardizing outputs across the team; presented the work as a technical paper at SIMEA 2026.
- Designed data validation checks for test campaigns, including GPS signal filtering (VBOX hardware) and compliance checks against coastdown test-standard criteria, so that only valid runs reached the final analysis.
- Developed internal analytics and visualization tools (Python, Plotly, Streamlit) adopted by the engineering team, replacing manual spreadsheet workflows with repeatable processes.
- Won 1st place at the Hyundai Prompt-a-thon (Sep 2026) with R&D colleagues: built an “R&D Automotive Intelligence Hub” on Microsoft 365 Copilot that consolidates multi-source information into executive reports.

Poli-USP BAJA SAE Team *Mar 2018 – Dec 2024*

Powertrain Director (2021 – 2024) · Powertrain Coordinator (2018 – 2021)

- Co-developed a custom telemetry data logger with the electronics sub-team, expanding sensor channels and enabling data-driven vehicle setup decisions across competition events.
- Led development of the team's first 4x4 gearbox from concept to competition, coordinating suppliers on cost, lead time, and manufacturability under tight deadlines.

EDUCATION

Escola Politécnica da USP (Poli-USP) *2018 – 2025*

B.S. in Electrical Engineering — Emphasis: Automation & Control | Specialization: Automotive Engineering

LANGUAGES

Portuguese: Native · **English:** Advanced (C1), professional working proficiency · **Spanish:** Conversational (B1)

AWARDS

- 1st Place Overall & 2nd Place (Logic) — Brazilian Knowledge Olympiad (OBS)
- Silver Medal — National Science Olympiad (ONC), Brazil
