PROFESSIONAL SUMMARY

Electrical engineer from Poli-USP who builds data products end to end. At Hyundai Motor Brasil I designed, built, and shipped an internal analysis application for the R&D team, from raw-file ingestion and validation to the statistical model, a Streamlit interface, and automated PDF reports. It cut analysis time by about 80% and became a paper at SIMEA 2026. I like owning the whole path, from the data to the interface people use.

SKILLS

Languages & Frameworks: Python (advanced), pandas, NumPy, Streamlit, JavaScript, React, Vite, SQL/SQLite (working), C

Data & ML: statistics, data validation, scikit-learn, XGBoost, SHAP

Shipping & Tooling: Git/GitHub, GitHub Actions CI/CD, GitHub Pages, Plotly, automated PDF/Excel reports

AI-assisted Dev: Claude Code agentic workflows, sub-agents, custom skills and hooks, Microsoft 365 Copilot

Domain: Test, sensor and time-series data, embedded data acquisition, automotive R&D; quick to learn new domains

WORK EXPERIENCE

Hyundai Motor Brasil *Jan 2025 – Present*

Junior Research & Development Analyst – Energy Efficiency & Data Analytics

- Designed and shipped an internal coastdown analysis app end to end (Python, Streamlit, SQLite): ingestion from multiple acquisition systems, weather-data sync, automated validation, statistical model, and standardized PDF reports. Cut analysis time by about 80% and became a paper at SIMEA 2026.
- Maintained it through ~150 commits with tests and a performance audit, using Claude Code as a coding assistant.
- Developed internal analytics and visualization tools (Python, Plotly, Streamlit) adopted by the engineering team, replacing manual spreadsheet workflows.
- Won 1st place at the Hyundai Prompt-a-thon (Sep 2026) with R&D colleagues: a Microsoft 365 Copilot hub that consolidates multi-source information into executive reports.

Poli-USP BAJA SAE Team *Mar 2018 – Dec 2024*

Powertrain Director (2021 – 2024) · Powertrain Coordinator (2018 – 2021)

- Co-developed a custom STM32 telemetry data logger for vehicle setup decisions (topic of my undergraduate thesis).
- Led the team's first 4x4 gearbox from concept to competition, coordinating suppliers on cost, lead time, and manufacturability.

SELECTED PROJECTS

- Portfolio website (felipeeckert.github.io): designed and built with React, Vite, GSAP, and canvas animations, deployed with GitHub Actions.
- F1 lap time prediction (GitHub): data pipeline over 4,000+ race laps with FastF1 and pandas; model comparison with scikit-learn, XGBoost, and SHAP (in progress).

EDUCATION

Escola Politécnica da USP (Poli-USP) *2018 – 2025*

B.S. in Electrical Engineering — Emphasis: Automation & Control | Specialization: Automotive Engineering

LANGUAGES

Portuguese: Native · **English:** Advanced (C1), professional working proficiency · **Spanish:** Conversational (B1)

PUBLICATIONS & AWARDS

- Co-author, “Data-Driven Coastdown Analysis”, SIMEA 2026 (Blucher Engineering Proceedings).
- 1st Place Overall & 2nd Place (Logic) — Brazilian Knowledge Olympiad (OBS)
